

StudyGenie Test Document

This is a simple sample PDF for testing document uploads, text extraction, summaries, flashcards, quizzes, and chat features.

Introduction

Artificial Intelligence (AI) refers to computer systems designed to perform tasks that normally require human intelligence. Examples include language understanding, image recognition, and decision-making.

Key Points

1. AI can automate repetitive tasks.
2. Machine Learning is a subset of AI.
3. Data quality affects model performance.
4. Ethical considerations are important in AI development.

Conclusion

AI continues to evolve rapidly and is being applied across industries such as healthcare, education, finance, and transportation.
